Keyword Index

ABR
A switching mechanism for ATM ABR traffic control 622
Abstract information models
A framework for designing ATM management systems by way of abstract information models and distributed object architectures 641
Active Network
Policy-based content delivery: an active network approach 241
Active networks
Secure dynamic anycasting for '*best*' server selection using active networks 1819
Active queue management
An optimization-oriented view of random early detection 1170
Active router
Secure dynamic anycasting for '*best*' server selection using active networks 1819
Ad hoc Networks
Flooding in wireless ad hoc networks 353
Adaptive arbitration
An efficient adaptive bus arbitration scheme for scalable shared-medium ATM switch 790
Adaptive channel coding
On integrating multiple access control and adaptive channel coding for cellular wireless voice and data services 903
Adaptive fax communication
An adaptive protocol for real-time fax communications over Internet 1134
Adaptive guaranteeing
An adaptive QoS guaranteeing MAC protocol for real-time traffic in TDMA-based wireless ATM networks 344
Adaptive protocol
Efficient multiple access control using a channel-adaptive protocol for a wireless ATM-based multimedia services network 970
Adaptive redundancy control
QoS-sensitive transport of real-time MPEG video using adaptive redundancy control 78
Adaptive routing
Lightpath setup time optimization in wavelength routed all-optical networks 984
Admission control
Dynamic resizing of utilization target in measurement-based admission control 1097
Admission test
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
Agent-based rate coordination
Agent-based rate coordination between TCP and ABR congestion control algorithms 850
On a congestion management scheme for high speed networks using aggregated large deviations principle 860
Aggregation scheme
Efficient hierarchical QoS routing in ATM networks 1648
Aggregation
Marking for QoS improvement 35
On the aggregation of deterministic service flows 2
Weighted fair bandwidth sharing using SCALE technique 51
Agile encryption
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Akamai
The measured performance of content distribution networks 202
Alarm correlation
A LAN fault diagnosis system 1439
All-optical network
Lightpath setup time optimization in wavelength routed all-optical networks 984
Analytical analysis
Throughput analysis of several reliable broadcast schemes for satellite communications 1425
Analytical model
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
Asymmetric DSL
Multiplexing of video and data sources in an ATM access network 889
Asynchronous transfer mode
A new per-VC scheduling scheme in ATM networks: two-phased weighted fair queuing 1319
A simplified approach based on source control for ATM ABR service 1272
Agent-based rate coordination between TCP and ABR congestion control algorithms 850
An estimation of traffic parameters for VBR services in ATM networks 1380
Design and analysis of a merging algorithm for multipoint-to-point ABR service in ATM networks 1673
On a congestion management scheme for high speed networks using aggregated large deviations principle 860
QoS-aware routing in ATM and IP-over-ATM 811
ATM management systems
A framework for designing ATM management systems by way of abstract information models and distributed object architectures 641
ATM networks
A method to improve the robustness of MPEG video applications over wireless networks 1452
A new multi-level statistical model for variable bit rate MPEG sources over ATM networks and its performance study 296
A new shared-buffer packet switch in ATM networks 445
Balanced packet discard for improving TCP performance in ATM networks 1525
Feedback priority control for MPEG video transmitted through ATM networks 693
Hierarchical neuro-fuzzy call admission controller for ATM networks 1031
QoS-based routing algorithms for ATM networks 416
Robust control and rate coordination for efficiency and fairness in ABR traffic with explicit rate marking 1329

PII: S0140-3664(00)00338-8

ATM switch fabric
Grid-based switch fabrics: a new approach in designing fault-tolerant ATM switches 1589
ATM switches
An efficient adaptive bus arbitration scheme for scalable shared-medium ATM switch 790
ATM virtual circuits
A non-disruptive handoff protocol for wireless ATM networks 958
ATM
A performance model of partial packet discard and early packet discard schemes in ATM switches 1540
A priority leaky-bucket regulator for virtual path traffic in ATM networks 1299
Performances of burst admission control schemes with cell multiplexing in ATM networks 595
Supporting TCP connections in wormhole routing and ATM networks 833
Traffic measurement and analysis in an ATM-based internet backbone 1508
Automated fault isolation
A LAN fault diagnosis system 1439
Automatic repeat request
Throughput analysis of several reliable broadcast schemes for satellite communications 1425
Available bit rate service
A simplified approach based on source control for ATM ABR service 1272
Available bit rate
Agent-based rate coordination between TCP and ABR congestion control algorithms 850
Design and analysis of a merging algorithm for multipoint-to-point ABR service in ATM networks 1673
On a congestion management scheme for high speed networks using aggregated large deviations principle 860
Relationship between the buffer threshold and the link utilization in ABR services 1341
Robust control and rate coordination for efficiency and fairness in ABR traffic with explicit rate marking 1329
Average rejection probability
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610

Backbone of cellular network
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Backplane bus network protocol
Performance analysis of *BusNet* protocol for backplane bus-based interprocessor communication 1578
Backpressure
Supporting TCP connections in wormhole routing and ATM networks 833
Backup multiplexing
Routing dependable connections in WDM optical networks 1225
Bandwidth allocation
Adaptive bandwidth allocation based on playback tunnel to support video on demand service over ATM networks 1485
Bandwidth
Optimal Web cache sizing: scalable methods for exact solutions 163
Banyan network
A high speed scheduler/controller for unbuffered banyan networks 1158
BAPCL
Performances of burst admission control schemes with cell multiplexing in ATM networks 595
Basestations
A non-disruptive handoff protocol for wireless ATM networks 958
Behavior learning
Intrusion detection through learning behavior model 1202
Best server
Secure dynamic anycasting for '*best*' server selection using active networks 1819
Binary exponential backoff
Equilibrium point analysis of the binary exponential backoff algorithm 1759
Block codes
Multilevel coding modulation system with binary block codes 292
Blocking probability
A non-disruptive handoff protocol for wireless ATM networks 958
A ratioed channel assignment scheme for initial and handoff calls in mobile cellular systems 308
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
Buffer control
A switching mechanism for ATM ABR traffic control 622
Buffer sharing
Traffic management in photonic packet switching nodes by priority assignment and selective discarding 1689
Buffer size
Relationship between the buffer threshold and the link utilization in ABR services 1341
Buffer threshold
Relationship between the buffer threshold and the link utilization in ABR services 1341
Burst admission control
Performances of burst admission control schemes with cell multiplexing in ATM networks 595
Bursty traffic arrivals
Study of temporal behaviour of packet loss in packet switches with bursty traffic arrivals 1080
BusNet
Performance analysis of *BusNet* protocol for backplane bus-based interprocessor communication 1578

CA
Technological infrastructure for PKI and digital certification 1460
Caching
On caching search engine query results 137
Call admission controller
Hierarchical neuro-fuzzy call admission controller for ATM networks 1031
Call delivery
A location management scheme to support non-

geographic phone numbers in personal communications services 271
Capacity planning
Optimal Web cache sizing: scalable methods for exact solutions 163
Cell delay variation
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Cell loss ratio
Supporting MPEG video VBR traffic in wireless networks 1188
Cell re-ordering
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Cell scheduling
Scheduling multicast traffic in input-buffered ATM switch 1607
Cell transfer delay
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Cellular system
Performance analysis of a channel assignment scheme in cellular communication systems 724
Cellular wireless voice
On integrating multiple access control and adaptive channel coding for cellular wireless voice and data services 903
Centralized control
Distributed caching with centralized control 256
Change characteristics
Studying the impact of more complete server information on Web caching 184
Channel assignment
A ratioed channel assignment scheme for initial and handoff calls in mobile cellular systems 308
Performance analysis of a channel assignment scheme in cellular communication systems 724
Channel failure
A method for multiple channel recovery in TDMA wireless communications systems 1147
Circuit-switching
A high speed scheduler/controller for unbuffered banyan networks 1158
Class based queuing
Using differentiated services to support Internet telephony 1846
Classification
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Co-operative systems
Configuration of communication networks by analysing co-operation graphs 1568
Coding modulation
Multilevel coding modulation system with binary block codes 292
COL
Efficient hierarchical QoS routing in ATM networks 1648
Collision resolution
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
Communicating extended finite state machine (CEFSM)
A test case generation approach for conformance testing of SDL systems 319
Communication processors
Hardware/software tradeoffs for IP-over-ATM frame reassembly in an integrated architecture 768
Communication switch architecture
A high speed scheduler/controller for unbuffered banyan networks 1158
Competitive analysis
Schemes for scheduling control messages by hierarchical protocols 731
Computer networks routing
A neural network method for minimum delay routing in packet-switched networks 933
Computer systems
Hardware/software tradeoffs for IP-over-ATM frame reassembly in an integrated architecture 768
Conformance testing
A reference model for conformance testing of T.120 multimedia conferencing protocols 334
Congestion control mechanism
Research into two source-based control algorithms for Internet traffic flows 1661
Congestion control
A switching mechanism for ATM ABR traffic control 622
An optimization-oriented view of random early detection 1170
GSC: a generic source-based congestion control algorithm for reliable multicast 575
Robust control and rate coordination for efficiency and fairness in ABR traffic with explicit rate marking 1329
Connection admission control
Effective bandwidth and associated CAC procedure for traffic streams multiplexed over a VBR link 781
Connection status table
Lightpath setup time optimization in wavelength routed all-optical networks 984
Content delivery
Policy-based content delivery: an active network approach 241
Content distribution network
Performance evaluation of redirection schemes in content distribution networks 207
The measured performance of content distribution networks 202
Content distribution
Web caching and content distribution: a view from the interior 222
Content reuse
Studying the impact of more complete server information on Web caching 184
Content selection
Content-selection strategies for the periodic prefetching of WWW resources via satellite 93
Content transcoding
Policy-based content delivery: an active network approach 241
Content transformation
Automatic proxy-based watermarking for WWW 144

Control and data flow testing
A test case generation approach for conformance testing of SDL systems 319
Controlled-load services
Dynamic resizing of utilization target in measurement-based admission control 1097
Conversion degree
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
Conversion percentage
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
Copyright
Automatic proxy-based watermarking for WWW 144
CORBA
Using dynamic configuration to manage a scalable multimedia distribution system 105
Correlated traffic
Traffic management in photonic packet switching nodes by priority assignment and selective discarding 1689
Cost
An estimation of traffic parameters for VBR services in ATM networks 1380
CRL
Technological infrastructure for PKI and digital certification 1460
Cube connected cycles
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060

de Bruijn graph
On new architectures for lightwave networks 868
Dead reckoning
A dynamic message filtering technique for 3D cyberspaces 1745
Decentralized algorithms
Optimal Web cache sizing: scalable methods for exact solutions 163
Deflection routing
Supporting TCP connections in wormhole routing and ATM networks 833
Degree matrix
Spanning tree approach in all-terminal network reliability expansion 1348
Delay random early detection
Applying delay random early detection to IP gateways 1370
Demand-driven
On defining a role for demand-driven surrogate origin servers 215
Dependable connection
Routing dependable connections in WDM optical networks 1225
Destination
A stability-based distributed routing mechanism to support unicast and multicast routing in ad hoc wireless network 1828
Deterministic multiplexing
On the aggregation of deterministic service flows 2
Differential service
Research into two source-based control algorithms for Internet traffic flows 1661
Differentiated service
A selective attenuation feedback mechanism for rate oscillation avoidance 19
Marking for QoS improvement 35
Weighted fair bandwidth sharing using SCALE technique 51
Differentiated services
Performance study of bandwidth reallocation algorithms for dynamic provisioning in differentiated services networks 1472
Traffic management in photonic packet switching nodes by priority assignment and selective discarding 1689
Using differentiated services to support Internet telephony 1846
Diffie–Hellman key exchange
Technological infrastructure for PKI and digital certification 1460
Digital certificate
Technological infrastructure for PKI and digital certification 1460
Digital island
The measured performance of content distribution networks 202
Digital libraries
Automatic proxy-based watermarking for WWW 144
Digital signature
Technological infrastructure for PKI and digital certification 1460
Distributed bus arbitration
An efficient adaptive bus arbitration scheme for scalable shared-medium ATM switch 790
Distributed caching schemes
Implementation and comparison of distributed caching schemes 677
Distributed caching
Distributed caching with centralized control 256
Distributed network management
Toward integrating IP multicasting in internet network management protocols 473
Distributed object architectures
A framework for designing ATM management systems by way of abstract information models and distributed object architectures 641
Distributed object collection
Implementation of an on-site web multimedia collector 716
Distributed systems
A reversing traversal algorithm to predict deleting node for the optimal *k*-node set reliability with capacity constraint of distributed systems 422
Document consistency
Differentiated strategies for replicating Web documents 232
Domain specific language
WebCaL — a domain specific language for web caching 191
Dominant pruning
Flooding in wireless ad hoc networks 353

DWDM
Bottlenecks in next generation DWDM-based optical networks 1726
Dynamic anycasting
Secure dynamic anycasting for '*best*' server selection using active networks 1819
Dynamic bandwidth allocation
Supporting MPEG video VBR traffic in wireless networks 1188
Dynamic configuration
Using dynamic configuration to manage a scalable multimedia distribution system 105
Dynamic membership
The directed reverse path join (DRPJ) protocol: an efficient multicast routing protocol 1121
Dynamic programming
Schemes for scheduling control messages by hierarchical protocols 731
Dynamic provisioning
Performance study of bandwidth reallocation algorithms for dynamic provisioning in differentiated services networks 1472
Dynamic proxy server
Policy-based content delivery: an active network approach 241

Early packet discard
A performance model of partial packet discard and early packet discard schemes in ATM switches 1540
Balanced packet discard for improving TCP performance in ATM networks 1525
Economic approaches
Optimal Web cache sizing: scalable methods for exact solutions 163
EFCI
Relationship between the buffer threshold and the link utilization in ABR services 1341
Effective bandwidth
Effective bandwidth and associated CAC procedure for traffic streams multiplexed over a VBR link 781
Electronic bottleneck
Bottlenecks in next generation DWDM-based optical networks 1726
Electronic processing bottleneck
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610
EM algorithm
A refined version of $M^x/G/\infty$ processes for modelling VBR video traffic 1105
Embedded testing
A test case generation approach for conformance testing of SDL systems 319
Equilibrium point analysis
Equilibrium point analysis of the binary exponential backoff algorithm 1759
Ethernet
Equilibrium point analysis of the binary exponential backoff algorithm 1759
Executability
A test case generation approach for conformance testing of SDL systems 319
Explicit rate control
A switching mechanism for ATM ABR traffic control 622
Fair queuing
A new per-VC scheduling scheme in ATM networks: two-phased weighted fair queuing 1319
Fairness coordination
Robust control and rate coordination for efficiency and fairness in ABR traffic with explicit rate marking 1329
Fairness
A new shared-buffer packet switch in ATM networks 445
A selective attenuation feedback mechanism for rate oscillation avoidance 19
Fault propagation duration
A LAN fault diagnosis system 1439
Fault severity
A LAN fault diagnosis system 1439
Fault-tolerance
Grid-based switch fabrics: a new approach in designing fault-tolerant ATM switches 1589
Feedback overhead
A selective attenuation feedback mechanism for rate oscillation avoidance 19
Feedback priority control
Feedback priority control for MPEG video transmitted through ATM networks 693
Feedback suppression
On the scaling of feedback algorithms for very large multicast groups 539
Finite state machine
A LAN fault diagnosis system 1439
Fixed-alternate routing
Lightpath setup time optimization in wavelength routed all-optical networks 984
Fixed-point iteration
A method for multiple channel recovery in TDMA wireless communications systems 1147
Flexible computing
Network traffic characterization and network information services—R&D on JGN 1734
Flexible threshold mechanism
A dynamic message filtering technique for 3D cyberspaces 1745
Flooding
Flooding in wireless ad hoc networks 353
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Flow admission control
Delivering end-to-end statistical QoS guarantees for *expedited forwarding* 822
Flow classification algorithms
MPOA flow classification design and analysis based on neural network technique 1007
Flow diversity
A selective attenuation feedback mechanism for rate oscillation avoidance 19
Formal description techniques
Rapid generation of functional tests using MSCs, SDL and TTCN 374

Forward error correction
QoS-sensitive transport of real-time MPEG video using adaptive redundancy control 78
Throughput analysis of several reliable broadcast schemes for satellite communications 1425
Forward error correlation
A study of proactive hybrid FEC/ARQ and scalable feedback techniques for reliable, real-time multicast 563
FTP
FTP Mirror Tracker: first steps towards URN 130
Functional testing
Rapid generation of functional tests using MSCs, SDL and TTCN 374
Fuzzy matrices
Resource reservation with mobile hosts using fuzzy matrices 434
FWM
Bottlenecks in next generation DWDM-based optical networks 1726

Genetic algorithm
Bandwidth-delay-constrained least-cost multicast routing based on heuristic genetic algorithm 685
Genetic algorithms
Intrusion detection through learning behavior model 1202
Gigabit networks
Network traffic characterization and network information services—R&D on JGN 1734
Grid-based architecture
Grid-based switch fabrics: a new approach in designing fault-tolerant ATM switches 1589
GSM networks
Stream ciphers for GSM networks 1090

Handoff protocols
A non-disruptive handoff protocol for wireless ATM networks 958
Handoff
Performance analysis of a channel assignment scheme in cellular communication systems 724
Handover control
High-speed PVC-based handover control in wireless ATM networks 1497
Hash routing schemes
Implementation and comparison of distributed caching schemes 677
Heterogeneous network
NLM: network-based layered multicast for traffic control of heterogeneous network 525
Hierarchical protocols
Schemes for scheduling control messages by hierarchical protocols 731
Hierarchical routing
Efficient hierarchical QoS routing in ATM networks 1648
High-performance computers
On caching search engine query results 137
High-speed networks
Efficient architectures and algorithms for multicasting data in computer communication networks 1618
High-traffic sites
On defining a role for demand-driven surrogate origin servers 215
Hit ratio
Distributed caching with centralized control 256
Hop count
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Hopfield neural networks
A neural network method for minimum delay routing in packet-switched networks 933
Hypercube
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Hysteresis
Efficient hierarchical QoS routing in ATM networks 1648

IMT-2000
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Input-queuing
Scheduling multicast traffic in input-buffered ATM switch 1607
Integrated services
Dynamic resizing of utilization target in measurement-based admission control 1097
Intelligent network
MPOA flow classification design and analysis based on neural network technique 1007
Intelligent Networks
Mobility management and control in intelligent wireless ATM networks 1780
Interconnection network
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Interior cache servers
Web caching and content distribution: a view from the interior 222
Internet backbone
Traffic measurement and analysis in an ATM-based internet backbone 1508
Internet caching protocol
Implementation and comparison of distributed caching schemes 677
Internet faxing
An adaptive protocol for real-time fax communications over Internet 1134
Internet telephony
Using differentiated services to support Internet telephony 1846
Internet
An efficient and easily deployable QoS-based routing scheme for online Internet multicasting 496
Automatic proxy-based watermarking for WWW 144
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Internetworking
Performance analysis of the TCP behavior in a geo satellite environment 877

Intrusion detection
Intrusion detection through learning behavior model 1202
IP gateways
Applying delay random early detection to IP gateways 1370
IP multicast deployment
Multicast performance measurement on a high-performance IP backbone 461
IP multicast
Toward integrating IP multicasting in internet network management protocols 473
IP over ATM
A link-state routing protocol for the provisioning of data services over ATM networks 917
IP QoS
Performance study of bandwidth reallocation algorithms for dynamic provisioning in differentiated services networks 1472
IP telephony
A simulation study of adaptive voice communications on IP networks 757
IP-over-ATM
Hardware/software tradeoffs for IP-over-ATM frame reassembly in an integrated architecture 768
IPSec
Technological infrastructure for PKI and digital certification 1460
IPv6
Modeling and performance analysis for IPv6 traffic with multiple QoS classes 1626
IS–41
An efficient location management scheme for PCS networks 1355
ITU-T H.263
Integration of video, voice and data transmission service based on PRMA wireless networks 942

***k*-node set reliability**
A reversing traversal algorithm to predict deleting node for the optimal *k*-node set reliability with capacity constraint of distributed systems 422
Key management
Technological infrastructure for PKI and digital certification 1460

LAN
A distributed real-time MAC protocol for WDM-based LANs 654
LAN, WAN, WWW, and VBR video traffic
Multifractal modeling of counting processes of long-range dependent network traffic 1400
Layer 4 router
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Leaky-bucket regulator
A priority leaky-bucket regulator for virtual path traffic in ATM networks 1299
Light-path routing
Efficient heuristic algorithms for light-path routing and wavelength assignment in WDM networks under dynamically varying loads 364
Lightpath restoration
Routing dependable connections in WDM optical networks 1225
Lightpath
Lightpath setup time optimization in wavelength routed all-optical networks 984
Linear feedback shift register
Stream ciphers for GSM networks 1090
Linear proportional response
A novel loss indication filtering approach for multicast congestion control 512
Link
Spanning tree approach in all-terminal network reliability expansion 1348
Locality
A new locality-based IP multicasting scheme for mobile hosts 486
Location management
A location management scheme to support non-geographic phone numbers in personal communications services 271
Location registration
A location management scheme to support non-geographic phone numbers in personal communications services 271
Location search
An efficient location management scheme for PCS networks 1355
Location update
An efficient location management scheme for PCS networks 1355
Long-range-dependence
Multifractal modeling of counting processes of long-range dependent network traffic 1400
Lookup
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Loss indication filtering
A novel loss indication filtering approach for multicast congestion control 512
LRV stack distance
Optimal Web cache sizing: scalable methods for exact solutions 163

MAC protocol
A distributed real-time MAC protocol for WDM-based LANs 654
An adaptive QoS guaranteeing MAC protocol for real-time traffic in TDMA-based wireless ATM networks 344
Markov reward models
A method for multiple channel recovery in TDMA wireless communications systems 1147
Match
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Max–min fairness
Weighted fair bandwidth sharing using SCALE technique 51
Maximum burst size
An estimation of traffic parameters for VBR services in ATM networks 1380

MDP
Efficient hierarchical QoS routing in ATM networks 1648
Measurement-based
Dynamic resizing of utilization target in measurement-based admission control 1097
Memory
Optimal Web cache sizing: scalable methods for exact solutions 163
Merging algorithm
Design and analysis of a merging algorithm for multipoint-to-point ABR service in ATM networks 1673
Mesh
On new architectures for lightwave networks 868
Message sequence chart
Rapid generation of functional tests using MSCs, SDL and TTCN 374
Middleware
Using dynamic configuration to manage a scalable multimedia distribution system 105
Minimal test length
Test selection for a nondeterministic FSM 1213
Minimum connected dominating set
Flooding in wireless ad hoc networks 353
Mirror site
FTP Mirror Tracker: first steps towards URN 130
MMDP
Performances of burst admission control schemes with cell multiplexing in ATM networks 595
Mobile Ad-Hoc Networks
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Mobile agent
Implementation of an on-site web multimedia collector 716
Mobile cellular systems
A ratioed channel assignment scheme for initial and handoff calls in mobile cellular systems 308
Mobile communications
Stream ciphers for GSM networks 1090
Mobile computing
Efficient multiple access control using a channel-adaptive protocol for a wireless ATM-based multimedia services network 970
Resource reservation with mobile hosts using fuzzy matrices 434
Mobile host
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Mobile hosts
A non-disruptive handoff protocol for wireless ATM networks 958
Mobile internet protocol
A new locality-based IP multicasting scheme for mobile hosts 486
Mobile IP
Using NDIS intermediate drivers for extending the protocol stack. A case study 703
Mobile network
A new locality-based IP multicasting scheme for mobile hosts 486
Mobility management
Adaptive algorithm for mobile terminal power *on/off* state management 1411
An efficient location management scheme for PCS networks 1355
Mobility management and control in intelligent wireless ATM networks 1780
Mobility specification
Resource reservation with mobile hosts using fuzzy matrices 434
Modeling
Analysis and modeling of a threshold based priority queueing system 284
Performance evaluation of TCP connections in ideal and non-ideal network environments 1769
MPEG video
A method to improve the robustness of MPEG video applications over wireless networks 1452
MPEG
A new multi-level statistical model for variable bit rate MPEG sources over ATM networks and its performance study 296
Feedback priority control for MPEG video transmitted through ATM networks 693
Supporting MPEG video VBR traffic in wireless networks 1188
MPOA performance analysis
MPOA flow classification design and analysis based on neural network technique 1007
MT power *on/off* state management
Adaptive algorithm for mobile terminal power *on/off* state management 1411
Multi-fibre
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
Multi-mesh
On new architectures for lightwave networks 868
Multicast communication
Integrated algorithms for delay bounded multicast routing and wavelength assignment in all optical networks 1390
Multicast congestion control
A novel loss indication filtering approach for multicast congestion control 512
Multicast feedback
On the scaling of feedback algorithms for very large multicast groups 539
Multicast join latency
Multicast performance measurement on a high-performance IP backbone 461
Multicast network
A QoS-providing multicast network management system 1045
Multicast performance
Multicast performance measurement on a high-performance IP backbone 461
Multicast routing protocols
The directed reverse path join (DRPJ) protocol: an efficient multicast routing protocol 1121
Multicast routing
Bandwidth-delay-constrained least-cost multicast routing based on heuristic genetic algorithm 685

Multicast
A new locality-based IP multicasting scheme for mobile hosts 486
QoS-based routing algorithms for ATM networks 416
The directed reverse path join (DRPJ) protocol: an efficient multicast routing protocol 1121
Multicasting data
Efficient architectures and algorithms for multicasting data in computer communication networks 1618
Multicasting
Scheduling multicast traffic in input-buffered ATM switch 1607
Secure dynamic anycasting for '*best*' server selection using active networks 1819
Multichannel
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610
Multifractal
Multifractal modeling of counting processes of long-range dependent network traffic 1400
Multihop networks
On new architectures for lightwave networks 868
Multimedia application
A QoS-providing multicast network management system 1045
Multimedia conferencing
A reference model for conformance testing of T.120 multimedia conferencing protocols 334
Multimedia distribution
Using dynamic configuration to manage a scalable multimedia dictribution system 105
Multimedia networking
Adaptive bandwidth allocation based on playback tunnel to support video on demand service over ATM networks 1485
Modeling and performance analysis for IPv6 traffic with multiple QoS classes 1626
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Multimedia web search engine
Implementation of an on-site web multimedia collector 716
Multimedia
A method to improve the robustness of MPEG video applications over wireless networks 1452
NLM: network-based layered multicast for traffic control of heterogeneous network 525
Multiple access control
Efficient multiple access control using a channel-adaptive protocol for a wireless ATM-based multimedia services network 970
On integrating multiple access control and adaptive channel coding for cellular wireless voice and data services 903
Multiple access network
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
Multipoint-to-point
Design and analysis of a merging algorithm for multipoint-to-point ABR service in ATM networks 1673
Multiwavelength control architecture
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610

NDIS intermediate driver
Using NDIS intermediate drivers for extending the protocol stack. A case study 703
Network bandwidth allocation
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Network calculus
On the aggregation of deterministic service flows 2
Network congestion
Research into two source-based control algorithms for Internet traffic flows 1661
Network information Ware House
Network traffic characterization and network information services—R&D on JGN 1734
Network management
A QoS-providing multicast network management system 1045
Configuration of communication networks by analysing co-operation graphs 1568
Network multiplexing gain
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Network QoS
On the aggregation of deterministic service flows 2
Network traffic modeling
Multifractal modeling of counting processes of long-range dependent network traffic 1400
Network
Performance evaluation of TCP connections in ideal and non-ideal network environments 1769
Spanning tree approach in all-terminal network reliability expansion 1348
Neuro-fuzzy controller
Hierarchical neuro-fuzzy call admission controller for ATM networks 1031
New telecommunications services
An integrated and systematic approach for the development of telematic services in heterogeneous distributed platforms 394
Node
Spanning tree approach in all-terminal network reliability expansion 1348
Node-affinity
A stability-based distributed routing mechanism to support unicast and multicast routing in ad hoc wireless network 1828
Non-geographic phone number
A location management scheme to support non-geographic phone numbers in personal communications services 271
Non-wavelength continuous
Efficient heuristic algorithms for light-path routing and wavelength assignment in WDM networks under dynamically varying loads 364

Nondeterministic Finite-State Machines
Test selection for a nondeterministic FSM 1213
Nonlinear effects
Bottlenecks in next generation DWDM-based optical networks 1726
Normal mixture distribution
A refined version of $M/G/\infty$ processes for modelling VBR video traffic 1105
NP-complete problem
Bandwidth-delay-constrained least-cost multicast routing based on heuristic genetic algorithm 685
NWC
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949

Object composition
Studying the impact of more complete server information on Web caching 184
Object relationships
Studying the impact of more complete server information on Web caching 184
Online multicasting
An efficient and easily deployable QoS-based routing scheme for online Internet multicasting 496
Optical networks
Bottlenecks in next generation DWDM-based optical networks 1726
On new architectures for lightwave networks 868
Optical packet network
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Optical packet switching
Traffic management in photonic packet switching nodes by priority assignment and selective discarding 1689
Optimal routing
A neural network method for minimum delay routing in packet-switched networks 933
Optimisation
Optimal Web cache sizing: scalable methods for exact solutions 163
Optimization problems
A neural network method for minimum delay routing in packet-switched networks 933
Optimization
An optimization-oriented view of random early detection 1170
Overflow probability
Efficient architectures and algorithms for multicasting data in computer communication networks 1618

Packet dropping probability
Weighted fair bandwidth sharing using SCALE technique 51
Packet filtering
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Packet loss
Study of temporal behaviour of packet loss in packet switches with bursty traffic arrivals 1080
Packet marking strategies
Marking for QoS improvement 35
Packet switches
Study of temporal behaviour of packet loss in packet switches with bursty traffic arrivals 1080
Packet switching
Scheduling multicast traffic in input-buffered ATM switch 1607
Packet transfer delay
Performance analysis of *BusNet* protocol for backplane bus-based interprocessor communication 1578
Packet-switched networks
A neural network method for minimum delay routing in packet-switched networks 933
Users' responsiveness in the price-controlled best-effort QoS model 1637
Partial product
A test case generation approach for conformance testing of SDL systems 319
Partitioning
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Per-VC queuing
A new per-VC scheduling scheme in ATM networks: two-phased weighted fair queuing 1319
Performance analysis and simulation
Hardware/software tradeoffs for IP-over-ATM frame reassembly in an integrated architecture 768
Performance analysis
Performance analysis of *BusNet* protocol for backplane bus-based interprocessor communication 1578
Performance evaluation
A link-state routing protocol for the provisioning of data services over ATM networks 917
Agent-based rate coordination between TCP and ABR congestion control algorithms 850
Improving scalability on reliable multicast communications 548
On a congestion management scheme for high speed networks using aggregated large deviations principle 860
Performance evaluation of TCP connections in ideal and non-ideal network environments 1769
Permission probability
Integration of video, voice and data transmission service based on PRMA wireless networks 942
Personal communication service (PCS)
A ratioed channel assignment scheme for initial and handoff calls in mobile cellular systems 308
Personal communication services
Adaptive algorithm for mobile terminal power *on/off* state management 1411
Personal communication system
An efficient location management scheme for PCS networks 1355
Personal communications system
A location management scheme to support non-geographic phone numbers in personal communications services 271
Perturbation analysis
Applying perturbation analysis to traffic shaping 798
PKI
Technological infrastructure for PKI and digital certification 1460

PKIX
Technological infrastructure for PKI and digital certification 1460
Planning based protocols
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
PNNI
Efficient hierarchical QoS routing in ATM networks 1648
Policy
Policy-based content delivery: an active network approach 241
Price-controlled best-effort model
Users' responsiveness in the price-controlled best-effort QoS model 1637
Pricing
Content-selection strategies for the periodic prefetching of WWW resources via satellite 93
Users' responsiveness in the price-controlled best-effort QoS model 1637
Primary and backup lightpath
Routing dependable connections in WDM optical networks 1225
Priority
A priority leaky-bucket regulator for virtual path traffic in ATM networks 1299
Research into two source-based control algorithms for Internet traffic flows 1661
Processing bottleneck
Bottlenecks in next generation DWDM-based optical networks 1726
Profile rate
Weighted fair bandwidth sharing using SCALE technique 51
Protocol conformance testing
Test case generation of a communication protocol by an adaptive state exploration 1242
Test selection for a nondeterministic FSM 1213
Proxy caches
GreedyDual* Web caching algorithm: exploiting the two sources of temporal locality in Web request streams 174
Proxy server
Automatic proxy-based watermarking for WWW 144
Pseudo reservation scheme
Integration of video, voice and data transmission service based on PRMA wireless networks 942
PVC-based
High-speed PVC-based handover control in wireless ATM networks 1497
PWC
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949

QoS provisioning
QoS support for UDP/TCP based networks 64
QoS routing
Efficient hierarchical QoS routing in ATM networks 1648
QoS
Adaptive resource negotiation based control for real time applications 1283
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
QoS-based routing algorithms for ATM networks 416
QoS-aware resource management
Using dynamic configuration to manage a scalable multimedia distribution system 105
QoS-routing
An efficient and easily deployable QoS-based routing scheme for online Internet multicasting 496
Quality of service
A new per-VC scheduling scheme in ATM networks: two-phased weighted fair queuing 1319
A QoS-providing multicast network management system 1045
Adaptive bandwidth allocation based on playback tunnel to support video on demand service over ATM networks 1485
An estimation of traffic parameters for VBR services in ATM networks 1380
Applying delay random early detection to IP gateways 1370
Bandwidth-delay-constrained least-cost multicast routing based on heuristic genetic algorithm 685
Content-selection strategies for the periodic prefetching of WWW resources via satellite 93
Marking for QoS improvement 35
Modeling and performance analysis for IPv6 traffic with multiple QoS classes 1626
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
QoS-sensitive transport of real-time MPEG video using adaptive redundancy control 78
Resource reservation with mobile hosts using fuzzy matrices 434
Supporting MPEG video VBR traffic in wireless networks 1188
Quality-of-Service
Delivering end-to-end statistical QoS guarantees for *expedited forwarding* 822
QoS-aware routing in ATM and IP-over-ATM 811
Quantitative provisioning
Performance study of bandwidth reallocation algorithms for dynamic provisioning in differentiated services networks 1472
Queue policy
QoS support for UDP/TCP based networks 64
Queueing system
Analysis and modeling of a threshold based priority queueing system 284
Queuing theory
Relationship between the buffer threshold and the link utilization in ABR services 1341

RA
Technological infrastructure for PKI and digital certification 1460

Random early detection
An optimization-oriented view of random early detection 1170
Rate oscillation
A selective attenuation feedback mechanism for rate oscillation avoidance 19
Rate-based flow control
A simplified approach based on source control for ATM ABR service 1272
Reachability analysis
A test case generation approach for conformance testing of SDL systems 319
Real-time delivery
A study of proactive hybrid FEC/ARQ and scalable feedback techniques for reliable, real-time multicast 563
Real-time MPEG video
QoS-sensitive transport of real-time MPEG video using adaptive redundancy control 78
Real-time protocols
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
Real-time service
A distributed real-time MAC protocol for WDM-based LANs 654
Real-time transmission
An adaptive protocol for real-time fax communications over Internet 1134
Receiver collisions
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610
Receiver QoS
Marking for QoS improvement 35
Receiver-based layered multicast
NLM: network-based layered multicast for traffic control of heterogeneous network 525
Redirection schemes
Performance evaluation of redirection schemes in content distribution networks 207
Redirection
FTP Mirror Tracker: first steps towards URN 130
Reducing state explosion
Test case generation of a communication protocol by an adaptive state exploration 1242
Regular multihop networks
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Reliability optimization
A reversing traversal algorithm to predict deleting node for the optimal *k*-node set reliability with capacity constraint of distributed systems 422
Reliability
Spanning tree approach in all-terminal network reliability expansion 1348
Reliable multicast protocols
Improving scalability on reliable multicast communications 548
Reliable multicast
A study of proactive hybrid FEC/ARQ and scalable feedback techniques for reliable, real-time multicast 563
GSC: a generic source-based congestion control algorithm for reliable multicast 575
Replication protocols
Differentiated strategies for replicating Web documents 232
Resource negotiation
Adaptive resource negotiation based control for real time applications 1283
Resource reservation
QoS support for UDP/TCP based networks 64
Resource reservation with mobile hosts using fuzzy matrices 434
Restoration techniques
A method for multiple channel recovery in TDMA wireless communications systems 1147
Reversing traversal algorithm
A reversing traversal algorithm to predict deleting node for the optimal *k*-node set reliability with capacity constraint of distributed systems 422
Robustness
A method to improve the robustness of MPEG video applications over wireless networks 1452
Router
NLM: network-based layered multicast for traffic control of heterogeneous network 525
Router-based QoS
QoS support for UDP/TCP based networks 64
Routing algorithms
QoS-based routing algorithms for ATM networks 416
Routing path
Hierarchical Cellular-Based management for mobile hosts in Ad-Hoc wireless networks 1554
Routing
A link-state routing protocol for the provisioning of data services over ATM networks 917
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Integrated algorithms for delay bounded multicast routing and wavelength assignment in all optical networks 1390
QoS-aware routing in ATM and IP-over-ATM 811

Satellite communication broadcast
Throughput analysis of several reliable broadcast schemes for satellite communications 1425
Satellite environment
Performance analysis of the TCP behavior in a geo satellite environment 877
Satellite multicasting
Content-selection strategies for the periodic prefetching of WWW resources via satellite 93
Scalability
A dynamic message filtering technique for 3D cyberspaces 1745
An efficient adaptive bus arbitration scheme for scalable shared-medium ATM switch 790
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Improving scalability on reliable multicast communications 548

On the aggregation of deterministic service flows 2
On the scaling of feedback algorithms for very large multicast groups 539
Ordered lookup with bypass matching for scalable per-flow classification in layer 4 routers 667
Scene
Supporting MPEG video VBR traffic in wireless networks 1188
Scene-based model
A new multi-level statistical model for variable bit rate MPEG sources over ATM networks and its performance study 296
Scheduling algorithms
Schemes for scheduling control messages by hierarchical protocols 731
Scheduling
Partition equalizer: a scheduler for algorithm-agile-encryptor ATM networks 631
Search engines
On caching search engine query results 137
Selective dropping model
Using differentiated services to support Internet telephony 1846
Self routing
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Self-pruning
Flooding in wireless ad hoc networks 353
Sender
Marking for QoS improvement 35
Server-directed transcoding
Server-directed transcoding 155
Service creation
An integrated and systematic approach for the development of telematic services in heterogeneous distributed platforms 394
Service development methodology
An integrated and systematic approach for the development of telematic services in heterogeneous distributed platforms 394
Service engineering
An integrated and systematic approach for the development of telematic services in heterogeneous distributed platforms 394
Service life-cycle
An integrated and systematic approach for the development of telematic services in heterogeneous distributed platforms 394
Shared-buffer
A new shared-buffer packet switch in ATM networks 445
Shuffle–exchange network
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Signaling
Mobility management and control in intelligent wireless ATM networks 1780
Simulation models
Performance evaluation of redirection schemes in content distribution networks 207
Simulation
A distributed real-time MAC protocol for WDM-based LANs 654
A simulation study of adaptive voice communications on IP networks 757
Throughput analysis of several reliable broadcast schemes for satellite communications 1425
Single encoder and decoder
Multilevel coding modulation system with binary block codes 292
SNMP
Toward integrating IP multicasting in internet network management protocols 473
Software testing
Test selection for a nondeterministic FSM 1213
Source
A stability-based distributed routing mechanism to support unicast and multicast routing in ad hoc wireless network 1828
Spanning tree
Spanning tree approach in all-terminal network reliability expansion 1348
Specification and description language
Rapid generation of functional tests using MSCs, SDL and TTCN 374
SPKI
Technological infrastructure for PKI and digital certification 1460
SRS
Bottlenecks in next generation DWDM-based optical networks 1726
Stack algorithms
Optimal Web cache sizing: scalable methods for exact solutions 163
State exploration
Test case generation of a communication protocol by an adaptive state exploration 1242
Statistical multiplexing gain
Traffic measurement and analysis in an ATM-based internet backbone 1508
Statistical properties
Supporting MPEG video VBR traffic in wireless networks 1188
Steiner trees
An efficient and easily deployable QoS-based routing scheme for online Internet multicasting 496
Stimulated Brillouin scattering
Bottlenecks in next generation DWDM-based optical networks 1726
Stochastic optimization
Applying perturbation analysis to traffic shaping 798
Stochastic Petri net package
A performance model of partial packet discard and early packet discard schemes in ATM switches 1540
Stochastic reward net
A performance model of partial packet discard and early packet discard schemes in ATM switches 1540
Stochastic reward nets
A method for multiple channel recovery in TDMA wireless communications systems 1147
Stream cipher
Stream ciphers for GSM networks 1090

Surrogate origin servers
On defining a role for demand-driven surrogate origin servers 215
Survival probability
Grid-based switch fabrics: a new approach in designing fault-tolerant ATM switches 1589
Sustainable cell rate
An estimation of traffic parameters for VBR services in ATM networks 1380
Switch
A new shared-buffer packet switch in ATM networks 445
Switched local area network
Dynamic planning based protocols for real-time communication in LAN and switched LAN environments 1256
Switching networks
Efficient architectures and algorithms for multicasting data in computer communication networks 1618
Symmetric and asymmetric encryption
Technological infrastructure for PKI and digital certification 1460

T.120 protocols
A reference model for conformance testing of T.120 multimedia conferencing protocols 334
Tandem queues
Applying perturbation analysis to traffic shaping 798
TCP connections
A non-disruptive handoff protocol for wireless ATM networks 958
TCP performance
Balanced packet discard for improving TCP performance in ATM networks 1525
TCP
Performance evaluation of TCP connections in ideal and non-ideal network environments 1769
Supporting TCP connections in wormhole routing and ATM networks 833
TPOT: translucent proxying of TCP 249
TCP/IP
A new locality-based IP multicasting scheme for mobile hosts 486
Performance analysis of the TCP behavior in a geo satellite environment 877
TDMA
A method for multiple channel recovery in TDMA wireless communications systems 1147
TDMA-based wireless ATM networks
An adaptive QoS guaranteeing MAC protocol for real-time traffic in TDMA-based wireless ATM networks 344
Temporal locality
GreedyDual* Web caching algorithm: exploiting the two sources of temporal locality in Web request streams 174
Test case generation
Test case generation of a communication protocol by an adaptive state exploration 1242
Test generation
Rapid generation of functional tests using MSCs, SDL and TTCN 374
Testing in context
A test case generation approach for conformance testing of SDL systems 319
Time slot mechanism
Research into two source-based control algorithms for Internet traffic flows 1661
Token bucket
Adaptive resource negotiation based control for real time applications 1283
Torus
On new architectures for lightwave networks 868
Traffic characterization
Network traffic characterization and network information services—R&D on JGN 1734
Traffic control
NLM: network-based layered multicast for traffic control of heterogeneous network 525
Traffic management
A simplified approach based on source control for ATM ABR service 1272
Traffic measurement
Traffic measurement and analysis in an ATM-based internet backbone 1508
Traffic model
A refined version of $M/G/\infty$ processes for modelling VBR video traffic 1105
Traffic modeling
A new multi-level statistical model for variable bit rate MPEG sources over ATM networks and its performance study 296
Traffic on backbone
Distributed caching with centralized control 256
Traffic parameters
An estimation of traffic parameters for VBR services in ATM networks 1380
Traffic shaping
Applying perturbation analysis to traffic shaping 798
Transcoding applets
Server-directed transcoding 155
Translucent proxying
TPOT: translucent proxying of TCP 249
Transmission control protocol
An optimization-oriented view of random early detection 1170
Agent-based rate coordination between TCP and ABR congestion control algorithms 850
On a congestion management scheme for high speed networks using aggregated large deviations principle 860
Transmission performance
Research into two source-based control algorithms for Internet traffic flows 1661
Transport protocol
GSC: a generic source-based congestion control algorithm for reliable multicast 575
Tree and tabular combined notation
Rapid generation of functional tests using MSCs, SDL and TTCN 374
TTP
Technological infrastructure for PKI and digital certification 1460

Unicasting
Secure dynamic anycasting for 'best' server selection using active networks 1819
Update message filtering
A dynamic message filtering technique for 3D cyberspaces 1745
Update policy
Efficient hierarchical QoS routing in ATM networks 1648
Utilization
Relationship between the buffer threshold and the link utilization in ABR services 1341

Variable bit rate
A new multi-level statistical model for variable bit rate MPEG sources over ATM networks and its performance study 296
Multiplexing of video and data sources in an ATM access network 889
Supporting MPEG video VBR traffic in wireless networks 1188
VBR over VBR
Effective bandwidth and associated CAC procedure for traffic streams multiplexed over a VBR link 781
VBR video
A refined version of $M^t/G/\infty$ processes for modelling VBR video traffic 1105
VBR
Effective bandwidth and associated CAC procedure for traffic streams multiplexed over a VBR link 781
Very high-speed DSL
Multiplexing of video and data sources in an ATM access network 889
Video model
A refined version of $M^t/G/\infty$ processes for modelling VBR video traffic 1105
Video on demand
Adaptive bandwidth allocation based on playback tunnel to support video on demand service over ATM networks 1485
Video-on-demand
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Virtual environment
A dynamic message filtering technique for 3D cyberspaces 1745
Virtual path traffic
A priority leaky-bucket regulator for virtual path traffic in ATM networks 1299
Virtual private network
Modeling and performance analysis for IPv6 traffic with multiple QoS classes 1626
Virtual private networks
Optional dynamic bandwidth allocation based on playback tunnel to support video-on-demand service in virtual private networks 1019
Virtual topology
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Voice coding
A simulation study of adaptive voice communications on IP networks 757
Voice quality
Using differentiated services to support Internet telephony 1846
VPN
Technological infrastructure for PKI and digital certification 1460

Waiting time
Analysis and modeling of a threshold based priority queueing system 284
Watermarking
Automatic proxy-based watermarking for WWW 144
Wavelength assignment
Efficient heuristic algorithms for light-path routing and wavelength assignment in WDM networks under dynamically varying loads 364
Integrated algorithms for delay bounded multicast routing and wavelength assignment in all optical networks 1390
Wavelength continuous
Efficient heuristic algorithms for light-path routing and wavelength assignment in WDM networks under dynamically varying loads 364
Wavelength division multiple access
Asynchronous transmission protocols for WDM LANs using multichannel control architecture 610
Wavelength division multiplexing
Bottlenecks in next generation DWDM-based optical networks 1726
Efficient heuristic algorithms for light-path routing and wavelength assignment in WDM networks under dynamically varying loads 364
Hypercube connected rings: a scalable and fault-tolerant logical topology for optical networks 1060
Routing dependable connections in WDM optical networks 1225
Wavelength routing
Lightpath setup time optimization in wavelength routed all-optical networks 984
WC
Approximate analysis of limited-range wavelength conversion all-optical WDM networks 949
WDM network
A distributed real-time MAC protocol for WDM-based LANs 654
Integrated algorithms for delay bounded multicast routing and wavelength assignment in all optical networks 1390
WDM
A novel routing algorithm for WDM-based micro-cellular wireless system 1714
Traffic management in photonic packet switching nodes by priority assignment and selective discarding 1689
Web cache replacement
GreedyDual* Web caching algorithm: exploiting the two sources of temporal locality in Web request streams 174
Web caches
Optimal Web cache sizing: scalable methods for exact solutions 163

Web caching
Content-selection strategies for the periodic prefetching of WWW resources via satellite 93
Studying the impact of more complete server information on Web caching 184
Web caching and content distribution: a view from the interior 222
WebCaL — a domain specific language for web caching 191
Web documents
Differentiated strategies for replicating Web documents 232
Web object cataloguing
Implementation of an on-site web multimedia collector 716
Web proxy networks
TPOT: translucent proxying of TCP 249
WebCal
WebCaL — a domain specific language for web caching 191
Windows NT
Using NDIS intermediate drivers for extending the protocol stack. A case study 703
Wireless ATM networks
A non-disruptive handoff protocol for wireless ATM networks 958
Wireless ATM
Efficient multiple access control using a channel-adaptive protocol for a wireless ATM-based multimedia services network 970
High-speed PVC-based handover control in wireless ATM networks 1497
Mobility management and control in intelligent wireless ATM networks 1780
Wireless communications
Stream ciphers for GSM networks 1090
Wireless networks
A method to improve the robustness of MPEG video applications over wireless networks 1452
An efficient location management scheme for PCS networks 1355
Performance evaluation of TCP connections in ideal and non-ideal network environments 1769
Supporting MPEG video VBR traffic in wireless networks 1188
Wormhole routing
Supporting TCP connections in wormhole routing and ATM networks 833

X.509
Technological infrastructure for PKI and digital certification 1460
